

HACKER SCHOOL
MONTERREY

Rails101

Mayra Cabrera

About me

Software engineer at Icalia Labs

I ❤️ Programming

I ❤️ Rails

Series, movies, books & cats

About you?

About this class

<https://github.com/hackerschoolmty/Rails101>

Topics

1. Introduction to Rails

- Why Rails
- Philosophy
- MVC architecture
- RESTful architecture

2. Getting started with Rails

- Basic commands
- Structure of rails app
- ActiveRecord
- Controllers
- Views

3. Basic routing

4. User management

5. Debugging

Topics

3. Basic routing

4. User management

5. Debugging

Introduction to Rails

What is Rails?

Web application
development framework
written in Ruby

Created in 2004 by
DHH (*David Heinemer
Hansson*)

What is Rails?

Open source: <https://github.com/rails/rails>

+ 3,000 contributors / + 58,000 commits

<http://rubyonrails.org>

Who uses Rails?

Basecamp

hulu

Why Rails?

Community: A lot of nice people

A lot of gems

Nice documentation

The rails way: It just feels right

Philosophy

Optimize for programmer happiness

Ruby is natural

It behaves how you'd expect it to

Philosophy

Optimize for programmer happiness

```
$ irb
$ irb(main):001:0> exit

$ irb
$ irb(main):001:0> quit
```

```
>>> exit
Use exit() or Ctrl-D (i.e. EOF) to exit
```

Philosophy

Exalts beautiful code

```
class Project < ActiveRecord::Base
  belongs_to :portfolio
  has_one :project_manager
  has_many :milestones
  has_many :deliverables, through: milestones

  validates :name, :description, presence: true
  validates :non_disclosure_agreement, acceptance: true
  validates :short_name, uniqueness: true
end
```

Philosophy

Exalts beautiful code

```
1 class CreateProducts < ActiveRecord::Migration
2   def change
3     create_table :products do |t|
4       t.string :name
5       t.text :description
6
7       t.timestamps
8     end
9   end
10 end
```

Philosophy

Convention over configuration

Rails has sensible defaults for just about every aspect of knitting together your application

If you need to override the conventions Rails makes that easy, too

How rails works?

MVC Architecture

Model-View-Controller

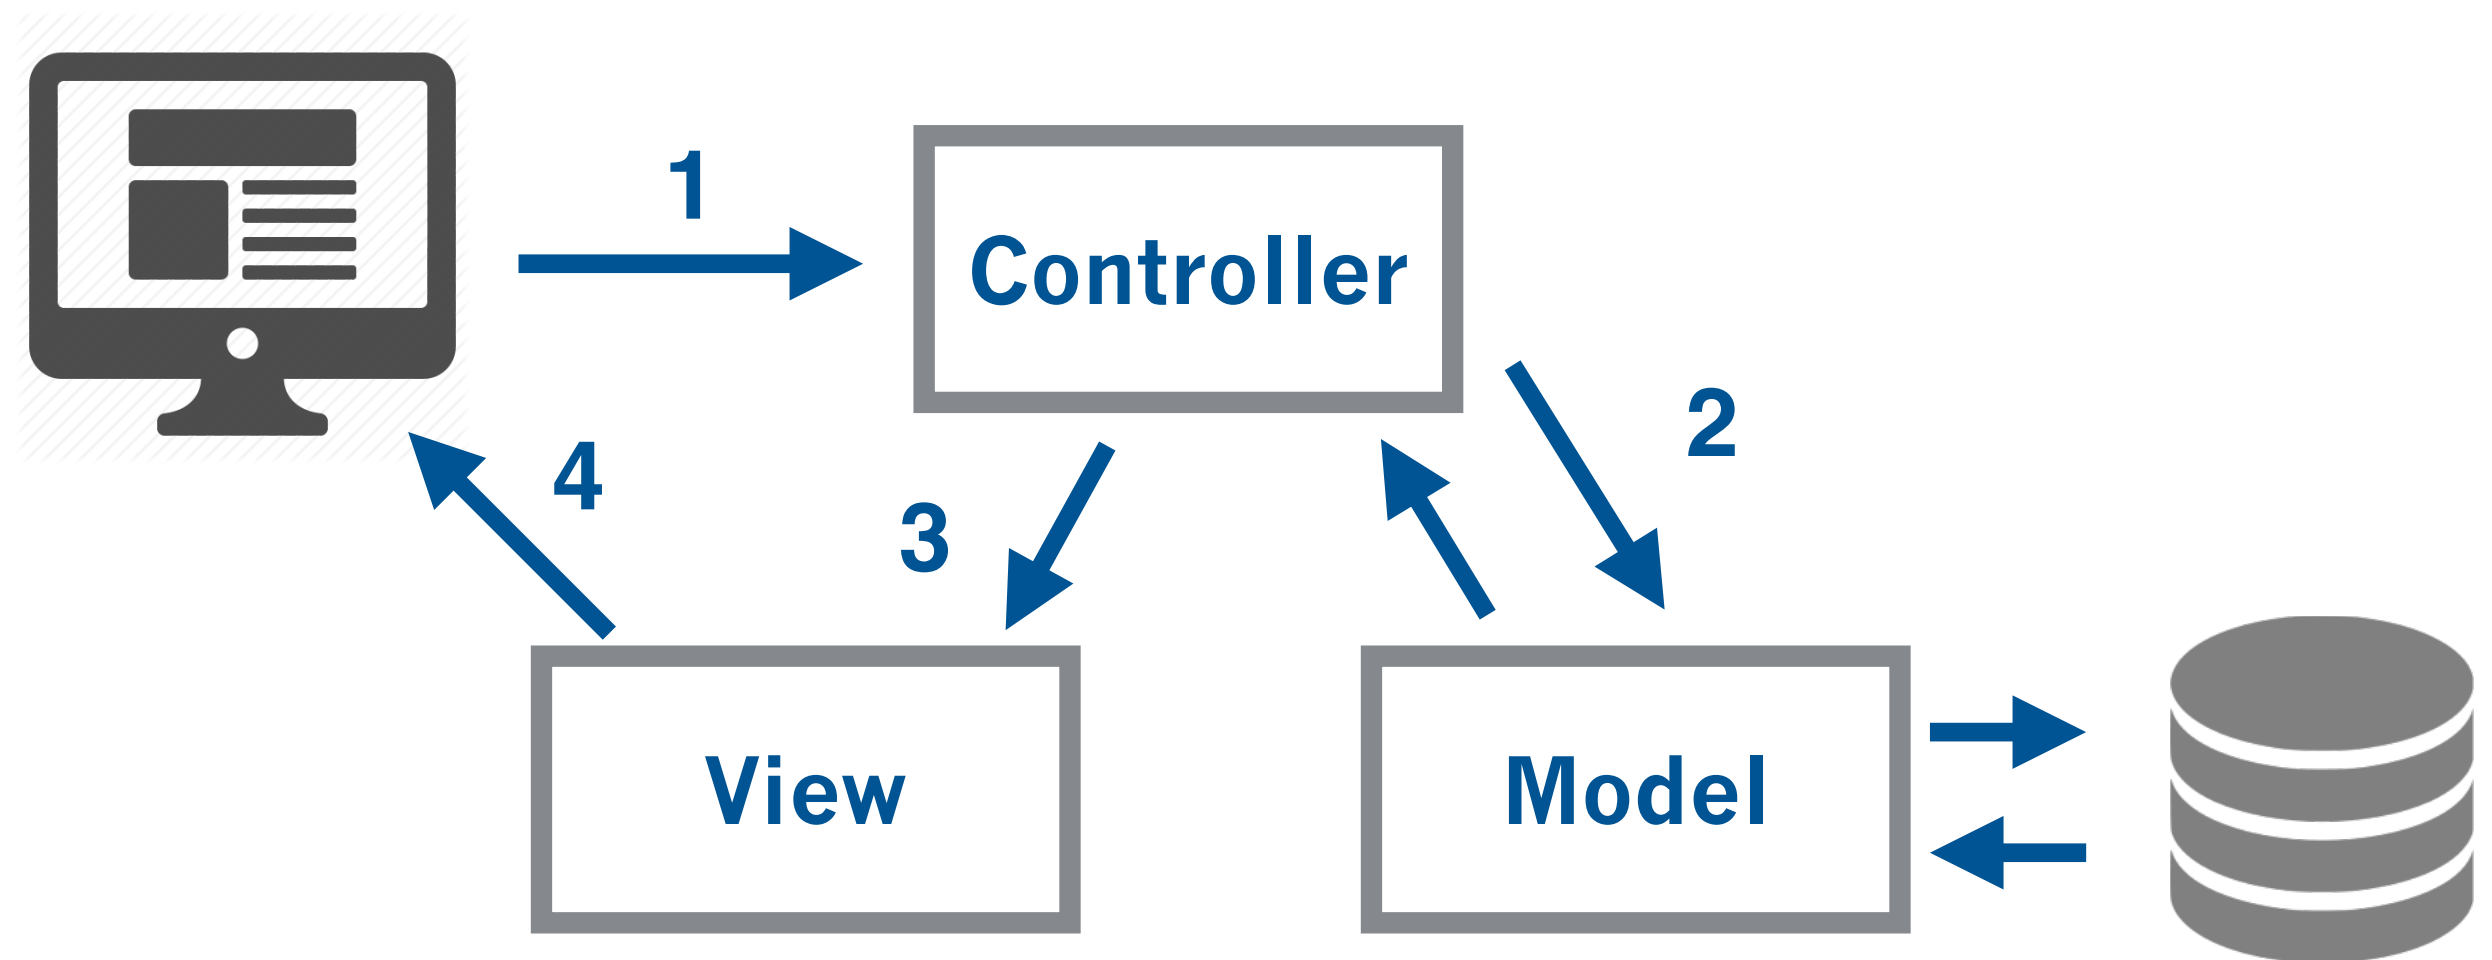

Model: It handles data and business logic

View: Responsible for generating a user interface

Controller: Orchestrate the application

MVC Architecture

Model-View-Controller

Restful Architecture

REpresentation **S**tate **T**ransfer”

¿SOAP? Hell no!

Restful Architecture

The idea is to use HTTP to make calls between machines

Created by Roy Fielding in his doctoral dissertation

Platform & Language independent

Restful Architecture

Use HTTP requests for all CRUD operations

GET, POST, PUT, DELETE

Restful Architecture

Students

GET /students

GET /students/1

POST /students

PUT /students/8

DELETE /students/10

You're free!

Let's create some apps!

Rails setup

```
$ ruby -v  
ruby 2.2.1p85
```

```
$ rails -v  
Rails 4.2.5
```

Ejercicios

<https://github.com/hackerschoolmt/Rails101/blob/master/01/exercises.md>

Rails commands

- rails new
- rails server
- rails console
- rails dbconsole
- rake
- bundle commands

Gracias! :)
